Supplement to
Employment and Unemployment in Areas Potentially Eligible under
CETA as Areas of Substantial Unemployment, May 1981-April 1982

U.S. Department of Labor
Bureau of Labor Statistics
September 1982

BLS/LAUS/AR-82/07 (Supplement No. 1)

Labor Force, Employment, and Unemployment Estimates for Potentially Eligible Areas of Substantial Unemployment Under the Comprehensive Employment and Training Act of 1978 as Amended

This publication provides labor force, employment, and unemployment estimates for selected Areas of Substantial Unemployment (ASU's) for the period May 1981 to April 1982 which may be eligible for funding under provisions of the Comprehensive Employment and Training Act of 1978 as amended (CETA). This report supplements BLS/LAUS/AR-82/07. It provides corrections for previously published data for the ASU in Wisconsin along with data for all other ASU's as published in the earlier publication. Thus, this report is a comprehensive source of the estimates for ASU's for the time period May 1981-April 1982.

Under Title II Part D and Titles IV and VI of CETA, an Area of Substantial Unemployment (ASU) is defined as an area having a rate of unemployment greater than 6.5 percent for the most recent 12 month period. Under Title II Parts A,B, and C, and ASU is defined as an area with an unemployment rate in excess of 6.5 percent for 3 consecutive months within the most recent 12 month period.

The entire Prime Sponsor area may qualify as an ASU. A contiguous subarea containing 10,000 or more inhabitants may also be designated as an ASU if the unemployment rate in the subarea meets the definition cited above.

Data for Prime Sponsors have already been published in earlier reports. The estimates contained in this report are for other subareas which may be eligible for designation as ASU's. The list of potentially eligible areas was provided to the Bureau of Labor Statistics by the Employment and Training Administration of the U.S. Department of Labor, which has the responsibility for the administration of CETA.

The data that follow are published in accordance with the requirements of Directives No. 4 and 11 issued by the Office of Federal Statistical Policy of the U.S. Department of Commerce. The estimates are the product of a Federal-State cooperative program in which State employment security agencies prepare labor force and unemployment estimates under concepts, definitions, and technical procedures established by the Bureau of Labor Statistics (BLS).

The national unemployment statistics published monthly by the BLS are obtained from the Current Population Survey (CPS), a survey of households. However, except in 10 large States and two large areas, the size of the current CPS sample is not sufficient to obtain reliable monthly State and area estimates. Therefore, statistics derived from State unemployment insurance (UI) operations, as well as adjustment factors based on data from the CPS and other sources, are used to calculate estimates for most States and local areas.

In 10 of the largest States (California, Florida, Illinois, Massachusetts, Michigan, New Jersey, New York, Ohio, Pennsylvania, and Texas) and two areas (New York City and the Los Angeles-Long Beach metropolitan area), the monthly estimates are taken directly from the CPS. These State and area estimates meet BLS standards of reliability (10 percent coefficient of variation at a 6 percent rate of unemployment). In the remaining 40 States and the District of Columbia, a 6-month moving average adjustment (using CPS and UI-based data for the State) is applied to the UI-based estimate to bring the State estimates into conformity with national definitions of employment and unemployment. Estimates for the labor market areas (except for the Los Angeles-Long Beach area) are obtained from the UI-based estimates adjusted to the State total for employment and unemployment. Estimates for counties and cities (except for New York City) within labor market areas (LMA's) are obtained by disaggregation of the LMA employment and unemployment estimates, using recent population and UI claims data where available, or relationships from the 1970 Census of Population.

Once each year, the monthly employment and unemployment estimates for the 10 large States and two large areas are revised to new population controls. The UI-based estimates in the remaining States and the District of Columbia are adjusted or "benchmarked" to annual averages obtained from the CPS. Estimates for areas within the State are then adjusted so that the sub-State components add to the Statewide totals. The estimates in this report for the period January-April 1982 are provisional and will be revised to new benchmarks in March of 1983. A fuller explanation of the technical procedures used to develop the estimates and of the benchmarking process appears monthly in the Explanatory Note for State and area unemployment data in the BLS periodical "Employment and Earnings" and in "Estimating State and Local Area Unemployment: A Guide for Data Users", BLS Bulletin 2058.

Because of the small size of many of the areas, as well as limitations of the data inputs, these estimates are subject to considerable statistical error. Readers are cautioned that the data have been developed solely to satisfy a program need and should not be used for time series analysis.

The labor force estimates are arranged alphabetically by State. An index appears in the lower right hand portion of each fiche.

Additional copies of this publication in microfiche form only may be ordered from: Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Employment and Unemployment in States and Local Areas,
January-June 1982

U.S. Department of Labor
Bureau of Labor Statistics
August 1982

BLS/LAUS/MR-82/08

Labor Force, Employment, and Unemployment Estimates for States, Labor Market Areas, Counties, Selected Cities, and Other Areas Used in the Administration of Federal Economic Assistance Programs

This publication provides provisional monthly estimates of the labor force, employment, and unemployment for States, Labor Market Areas, counties, and cities of 50,000 or more inhabitants. These estimates are furnished to the Economic Development Administration of the U.S. Department of Commerce for use in the administration of the Public Works and Economic Development Act of 1965 as amended, and to the Employment and Training Administration of the U.S. Department of Labor for possible use in the allocation of funds under the Comprehensive Employment and Training Act of 1973 as amended (CETA) and for designation of "labor surplus areas" under Defense Manpower Policy No. 4B and "areas of substantial unemployment" under the Buy American Act (Executive Order 10582).

The data that follow are published in accordance with the requirements of Directives No. 4 and 11 issued by the Office of Federal Statistical Policy of the U.S. Department of Commerce. The estimates are the product of a Federal-State cooperative program in which State employment security agencies prepare labor force and unemployment estimates under concepts, definitions, and technical procedures established by the Bureau of Labor Statistics (BLS).

The national unemployment statistics published monthly by the BLS are obtained from the Current Population Survey (CPS), a survey of households. However, except in 10 large States and two large areas, the size of the current CPS sample is not sufficient to obtain reliable monthly State and area estimates. Therefore, statistics derived from State unemployment insurance (UI) operations, as well as adjustment factors based on data from the CPS and other sources, are used to calculate estimates for most States and local areas.

In 10 of the largest States (California, Florida, Illinois, Massachusetts, Michigan, New Jersey, New York, Ohio, Pennsylvania, and Texas) and two areas (New York City and the Los Angeles-Long Beach metropolitan area), the monthly estimates are taken directly from the CPS. These State and area estimates meet BLS standards of reliability (10 percent coefficient of variation at a 6 percent rate of unemployment). In the remaining 40 States and the District of Columbia, a 6-month moving average adjustment (using CPS and UI-based data for the State) is applied to the UI-based estimate to bring the State estimates into conformity with national definitions of employment and unemployment. Estimates for the labor market areas (except for the Los Angeles-Long Beach area) are obtained from the UI-based estimates adjusted to the State total for employment and unemployment. Estimates for counties and cities (except for New York City) within labor market areas (LMA's) are obtained by disaggregation of the LMA employment and unemployment estimates, using recent population and UI claims data where available, or relationships from the 1970 Census of Population.

Once each year, the monthly employment and unemployment estimates for the 10 large States and two large areas are revised to new population controls. The UI-based estimates in the remaining States and the District of Columbia are adjusted or "benchmarked" to annual averages obtained from the CPS. Estimates for areas within the State are then adjusted so that the sub-State components add to the Statewide totals. The estimates in this report are provisional and will be revised in April 1983 to new population controls and/or benchmarks from the CPS. A fuller explanation of the technical procedures used to develop the estimates and of the benchmarking process appears monthly in the Explanatory Note for State and area unemployment data in the BLS periodical "Employment and Earnings" and in "Estimating State and Local Area Unemployment: A Guide for Data Users", BLS Bulletin 2058.

Because of the small size of many of the areas, as well as limitations of the data inputs, these estimates are subject to considerable statistical error. Readers are cautioned that the data have been developed solely to satisfy a program need and should not be used for time series analysis.

Estimates are provided for several levels of geographic disaggregation as follows:

ST= State.

SMSA= Standard Metropolitan Statistical Area: An urban area comprised of a central city or cities having a population of at least 50,000 and the surrounding county or counties (based on criteria of economic integration and degree of urban character).

Note: These area boundaries, in almost all instances, are coterminous with SMSA's as defined by the U.S. Department of Commerce, Office of Federal Statistical Policy and Standards. However, there are some exceptions. The complete area title for these exceptions states that it is an "LMA" rather than an "SMSA", (e.g. see New York SMSA).

LMA= Labor Market Area: An area composed of a city or cities and surrounding county or counties which define a cohesive economic unit. A multicounty portion of an interstate SMSA is also coded as an LM (e.g. see Kansas Part of Kansas City SMSA).

BS= CPS Balance of State: CPS direct-use State total less CPS direct-use areas within the State.
CN= any county which is not an SM, PS, or PA.
CT= any city which is not a PS, PA, or CN.
PT= part of a city which lies in two or more counties.
CC= Consortium Component: A city or county which is part of a Consortium under CETA. (A Consortium is a CETA area composed of several cities and/or counties.)
PS= Prime Sponsor: an area designation under CETA. It must be an area with 100,000 or more inhabitants and may be a city, county, consortium, or the balance of a State.
PA= Program Agent: an area of 50,000 or more inhabitants within a PS. It may be a county, consortium, or the balance of a county.

Appendix A of this report provides labor force and unemployment estimates used to administer certain special provisions of the 1978 amendments to the CETA Act. The estimates in Appendix A do not replace the official estimates developed as part of the Federal-State cooperative program.

The labor force estimates are arranged alphabetically by State. Estimates for major metropolitan areas (SMSA) follow the State record, followed by other labor market areas (LMA), counties, cities, and unique progam areas under CETA (e.g. multicounty consortium, prime sponsors or program agents which are not units of local government, etc.). Microfiche of these data are organized in lettered rows and numbered columns which read from top to bottom. An index appears in the lower right hand portion of each fiche.

Additional copies of this publication in microfiche form only may be ordered from: Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Employment and Unemployment in States and Local Areas,
January-December 1982

U.S. Department of Labor
Bureau of Labor Statistics
February 1983

BLS/LAUS/MR-83/02

Labor Force, Employment, and Unemployment Estimates for States, Labor Market Areas, Counties, Selected Cities, and Other Areas Used in the Administration of Federal Economic Assistance Programs

This publication provides provisional monthly estimates of the labor force, employment, and unemployment for States, Labor Market Areas, counties, and cities of 50,000 or more inhabitants. These estimates are furnished to the Economic Development Administration of the U.S. Department of Commerce for use in the administration of the Public Works and Economic Development Act of 1965 as amended, and to the Employment and Training Administration of the U.S. Department of Labor for possible use in the allocation of funds under the Job Training Partnership Act of 1982 and for designation of "labor surplus areas" under Defense Manpower Policy No. 4B and "areas of substantial unemployment" under the Buy American Act (Executive Order 10582).

The data that follow are published in accordance with the requirements of Directives No. 4 and 11 issued by the Office of Federal Statistical Policy of the U.S. Department of Commerce. The estimates are the product of a Federal-State cooperative program in which State employment security agencies prepare labor force and unemployment estimates under concepts, definitions, and technical procedures established by the Bureau of Labor Statistics (BLS).

The national unemployment statistics published monthly by the BLS are obtained from the Current Population Survey (CPS), a survey of households. However, except in 10 large States and two large areas, the size of the current CPS sample is not sufficient to obtain reliable monthly State and area estimates. Therefore, statistics derived from State unemployment insurance (UI) operations, as well as adjustment factors based on data from the CPS and other sources, are used to calculate estimates for most States and local areas.

In 10 of the largest States (California, Florida, Illinois, Massachusetts, Michigan, New Jersey, New York, Ohio, Pennsylvania, and Texas) and two areas (New York City and the Los Angeles-Long Beach metropolitan area), the monthly estimates are taken directly from the CPS. These State and area estimates meet BLS standards of reliability (10 percent coefficient of variation at a 6 percent rate of unemployment). In the remaining 40 States and the District of Columbia, a 6-month moving average adjustment (using CPS and UI-based data for the State) is applied to the UI-based estimate to bring the State estimates into conformity with national definitions of employment and unemployment. Estimates for the labor market areas (except for the Los Angeles-Long Beach area) are obtained from the UI-based estimates adjusted to the State total for employment and unemployment. Estimates for counties and cities (except for New York City) within labor market areas (LMA's) are obtained by disaggregation of the LMA employment and unemployment estimates, using recent population and UI claims data where available, or relationships from the 1970 Census of Population.

Once each year, the monthly employment and unemployment estimates for the 10 large States and two large areas are revised to new population controls. The UI-based estimates in the remaining States and the District of Columbia are adjusted or "benchmarked" to annual averages obtained from the CPS. Estimates for areas within the State are then adjusted so that the sub-State components add to the Statewide totals. The estimates in this report are provisional and will be revised in April 1983 to new population controls and/or benchmarks from the CPS. A fuller explanation of the technical procedures used to develop the estimates and of the benchmarking process appears monthly in the Explanatory Note for State and area unemployment data in the BLS periodical "Employment and Earnings" and in "Estimating State and Local Area Unemployment: A Guide for Data Users", BLS Bulletin 2058.

Because of the small size of many of the areas, as well as limitations of the data inputs, these estimates are subject to considerable statistical error. Readers are cautioned that the data have been developed solely to satisfy a program need and should not be used for time series analysis.

Estimates are provided for several levels of geographic disaggregation as follows:

ST= State.

SMSA= Standard Metropolitan Statistical Area: An urban area comprised of a central city or cities having a population of at least 50,000 and the surrounding county or counties (based on criteria of economic integration and degree of urban character).

Note: These area boundaries, in almost all instances, are coterminous with SMSA's as defined by the U.S. Department of Commerce, Office of Federal Statistical Policy and Standards. However, there are some exceptions. The complete area title for these exceptions states that it is an "LMA" rather than an "SMSA", (e.g. see New York SMSA).

LMA= Labor Market Area: An area composed of a city or cities and surrounding county or counties which define a cohesive economic unit. A multicounty portion of an interstate SMSA is also coded as an LM (e.g. see Kansas Part of Kansas City SMSA).

BS= CPS Balance of State: CPS direct-use State total less CPS direct-use areas within the State.
CN= any county which is not an SM, PS, or PA.
CT= any city which is not a PS, PA, or CN
PT= part of a city which lies in two or more counties.
CC= Consortium Component: A city or county which is part of a Consortium under CETA. (A Consortium is a CETA area composed of several cities and/or counties.)
PS= Prime Sponsor: an area designation under CETA. It must be an area with 100,000 or more inhabitants and may be a city, county, consortium, or the balance of a State.
PA= Program Agent: an area of 50,000 or more inhabitants within a PS. It may be a county, consortium, or the balance of a county.

Appendix A of this report provides labor force and unemployment estimates used to administer certain special provisions of the 1978 amendments to the CETA Act. The estimates in Appendix A do not replace the official estimates developed as part of the Federal-State cooperative program.

The labor force estimates are arranged alphabetically by State. Estimates for major metropolitan areas (SMSA) follow the State record, followed by other labor market areas (LMA), counties, cities, and unique progam areas under CETA (e.g. multicounty consortium, prime sponsors or program agents which are not units of local government, etc.). Microfiche of these data are organized in lettered rows and numbered columns which read from top to bottom. An index appears in the lower right hand portion of each fiche.

Additional copies of this publication in microfiche form only may be ordered from: Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.
